This report includes data from certificates or reports of deaths, marriages, divorces, spontaneous abortions or stillbirths, and induced abortions which were received in the State Vital Records office by June 30, 1984. The figures reflect data of vital events occurring to residents of Georgia, including resident military, and to Georgia residents in other states or countries.

The aggregation of infant mortality frequencies and rates is determined by the mother's indicated residence, as shown on the matching Certificate of Live Birth. The 12 infant deaths occurring to military personnel are also included.

Finally, frequencies for blacks and whites in some tables will not add up to equal the total figure. The difference is accounted for by "other races"; however, all races are included in the total category (e.g., Muscogee County, live births, ages 18-19).

INTRODUCTION

This volume is the 37th annual **Vital Statistics Report** of the State of Georgia. Its purpose is to serve as a basic resource tool providing useful information to public and private individuals, institutions, and agencies involved with the many phases of planning, especially the planning and evaluation of health services for Georgia citizens.

The tables in this volume reflect annual frequencies and rates of occurrence of vital events for the state's residents, 19 health districts, 7 health service areas, 8 standard metropolitan statistical areas, 159 counties, and 147 cities.

The Office of Planning and Budget's civilian, noninstitutional population projections, used in this volume, were adjusted by adding back a resident residual component. These projections are included to allow the reader to compute rates not represented in this volume.

Please refer to the section on **Technical Notes** for definitions and formulas used in this publication. Other data not presented are available upon request. Some requests may require a fee, however. Send requests to the address shown below.

We hope the information provided will prove helpful to users of this document. Comments or suggestions regarding this publication will be welcomed.

TECHNICAL NOTES

This section provides the reader with definitions and formulas of the rates used in this volume, as well as other rates that might be calculated from data contained herein. Note that these rates may not agree with rates used in previous publications from this office, from other states, or from national statistics.

When comparing statistics, it is essential to determine whether or not the basis for computing rates is the same. For example, birth rates are often reported as either **crude** or **fertility** rates. The calculation of a **crude rate** is based on total population, whereas the calculation of a **fertility rate** is based on the female population of childbearing age. Total birth rates in this publication are per 1,000 females, ages 15-44.

The definitions and formulas in this section are arranged in the order of their appearance in the main text. Marriage and divorce figures are not included in the city section.

Definitions

Such file shall be retained for as long as the State Registrar deems necessary and it shall then be destroyed.
