INTRODUCTION

This publication is the 74th continuous production of Vital Statistics Report for the State of Georgia. The 1993 data set contains several sections: Natality, Mortality, Marriages, Divorces, Populations and Most Frequent Infant Names. This information is a vital statistics reference for individuals, institutions, and agencies involved with Health Services; especially in analyzing, planning, and evaluating Public Health service delivery for Georgia citizens.

The information in this volume consists of annual frequencies and rates of vital events for the state's residents (except as noted). The publication organizes the information by state, health district, metropolitan statistical area, county and city.

The publication uses populations from the 1990 United States Census to determine rates. Analysts use two population denominator files to compute rates. The State Health Planning Agency supplies the yearly civilian non-institutional population file, and the U.S. Census Bureau supplies the institutional population file. This U.S. Census Bureau file contains military, correctional, dormitory, nursing home, mental hospital, orphanage, and monastery data.

Analysts combine the two files with the nine previous years to produce a ten year file for seven lifestages: <1, 1-9, 10-19, 20-44, 45-64, 65 and older, and total. If closely compared, the Vital Statistics Report and the Planning Information Report yield minor differences between the State totals in the two reports. The Vital Statistics Report summarizes the county totals to calculate statistics for the state, district, and metropolitan areas. The Planning Information Report does not use county codes to generate state totals. Also, the two computer programs used to produce these reports employ different rounding methodology to calculate mothers' ages.

This report includes 1993 Georgia resident data taken from birth, death, spontaneous fetal death, induced abortion, marriage, and divorce certificates received in the State Vital Records office by June 30, 1994. (Records received after this date are not included in this report). The figures and rates shown in the tables reflect data from reported vital events.

Other vital statistics data, not presented in this publication, are available upon request. However, a fee may be required to reproduce the information.

Send all statistical requests to:

Center for Health Information
Health Assessment Services Unit (HASU)
Two Peachtree Street (NW)
Third Floor Annex
Atlanta, GA 30303
(404) 657-6300.

HASU staff trust that the information provided in this volume will prove helpful. Comments or suggestions regarding this publication are welcome.

NOTE: Vital statistics presented as "Black" do not include "Other" races. The "Total" vital statistics figures include all races. Therefore, "Other" races may be calculated by subtracting "White" and "Black" from the "Total" in each row.

"Black" plus "White" equals the "Total" in population statistics presented. "Black" populations include all races except "White".

INFANT MORTALITY

The assignment of infant mortality frequencies and rates depends on the mother's residence. The mother's residence appears on the matching Certificate of Live Birth.

Analysts use the following methodology to assign infant deaths to counties in Georgia. Abstractors review each infant death record and the corresponding birth record to determine the county of residence. Several types of infant death record matches may occur during the year. These processes appear below.

Type (1) The majority of infant deaths occur in the same county where the infant was born. This usually means that the county of residence is the same on both certificates.

Example: The infant death certificate shows Fulton County as the county of residence. The matching birth certificate shows the mother's county of residence also as Fulton County. Abstractors code this infant death to Fulton County (code 060). The reviewers send copies of the matched infant death and birth records to District 3 Unit 2 (Fulton).

Type (2) Some matched records show different counties of residence on the certificates. Reviewers confirm records by contacting the appropriate local registrar to determine if the county of residence shown is correct on each

record. If the indicated residences are different, abstractors assign the infant death to the mother's county of residence as shown on the birth certificate. This is consistent with National Center for Health Statistics procedure for all states.

Example: An infant death certificate shows Fulton County (code 060) as the county of residence but the matching birth record indicates Dekalb County (code 044) as the mother's county of residence. The reviewer assigns the infant death to Dekalb County.

Type (3) Some infant deaths occur to Georgia residents in other states. In most cases, these deaths occur in Florida, Alabama, Tennessee, North Carolina and South Carolina. These states send copies of the death certificates to Georgia because there is a vital records inter-state exchange agreement between all states.

Example: An infant death occurs to Georgia Residents in Alabama. The State Office of Vital Records receives a copy of an Alabama death certificate showing Muscogee County as the county of residence. The Georgia matching birth certificate shows Muscogee County as the mother's county of residence. In this case, reviewers assign the infant death to Muscogee County.

Type (4) If a Georgia resident appears on an out-of-state (non-Georgia) death record and no Georgia birth record can be found to match it, the reviewer then assigns the infant death to the county of residence shown on the

death certificate.

Example: The State Office of Vital Records receives a South Carolina death certificate showing Richmond County as the county of residence. If reviewers find no Georgia or South Carolina birth record, then they assign this infant death to Richmond County, District 6 (Augusta).

Analysts include only Georgia residents listed on the infant death records to calculate the Georgia resident infant mortality rate. Reviewers send copies of these records to the state of residence as shown on the death certificate.

The sections in this volume identify statistical tables at the state, health district, MSA, county, or city levels. Health Districts appear in numerical order, while all other geographic areas appear alphabetically.

DEFINITIONS

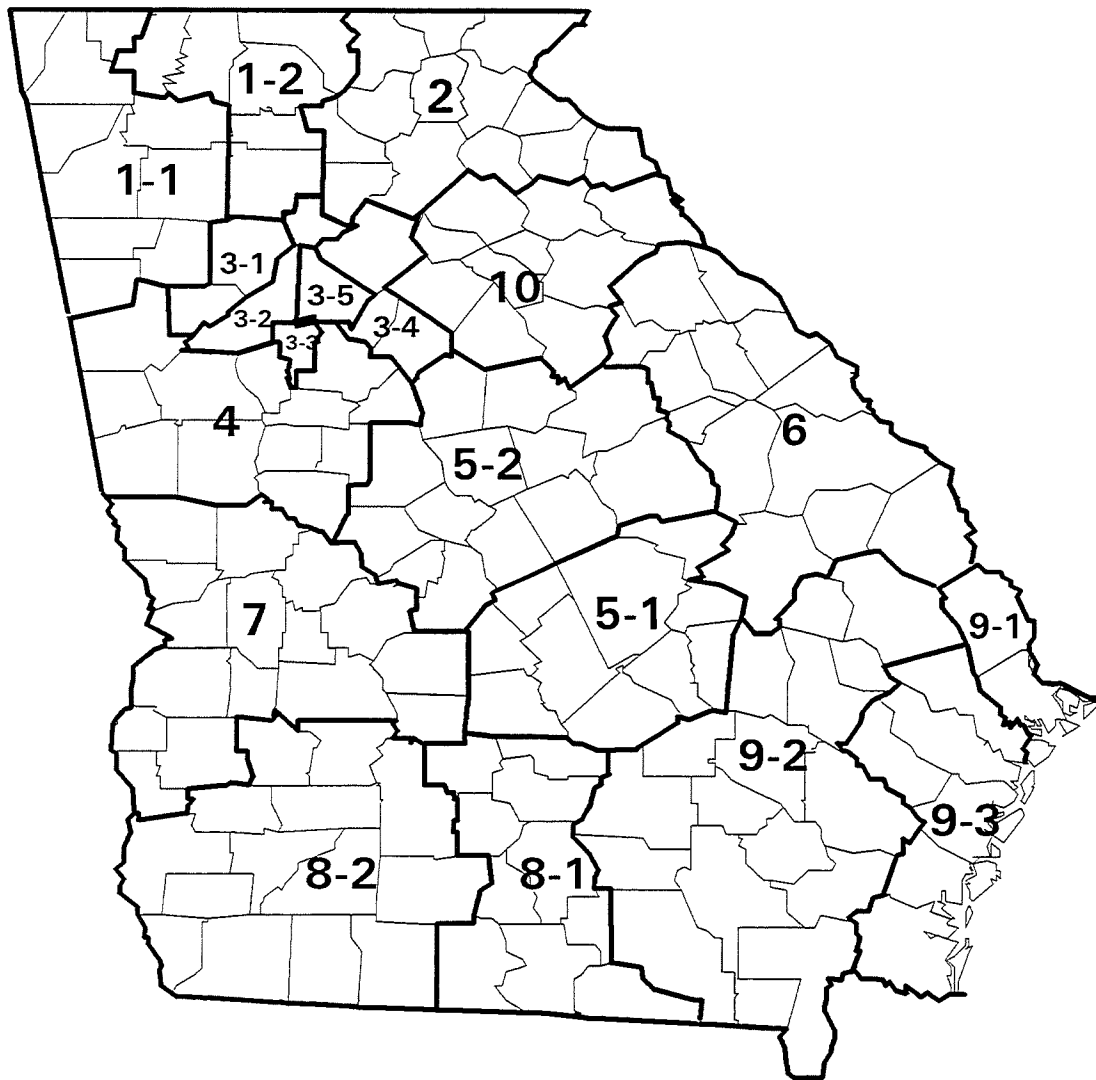

Population	Projections based on the 1990 Census.
Race	Race classifications are tabulated by white and black categories as stated on vital record. "Other" or unknown races are included in the total category.
Live birth to an unwed mother	A live birth to an unmarried female or to one who did not state marital status, and no father's name appears on the birth certificate.
Low birth weight	A live birth with a birth weight less than 2,500 grams.
Very low birth weight	A live birth with a birth weight less than 1,500 grams.
Spontaneous abortion or stillbirth	A Fetal death is an outcome of pregnancy other than a live birth or induced abortion. There are no weight or gestational age limits for reporting fetal deaths in Georgia.
Induced abortion	The purposeful interruption of a pregnancy with the intent to produce other than a live born infant or to remove a deceased fetus.
Infant mortality	A death occurring to an infant less than one year of age.
Neonatal mortality	A death occurring to an infant less than 28 days old.
Post-Neonatal mortality	A death occurring to an infant age 28 days or more, but less than one year of age.
Maternal mortality	A death resulting from complications of pregnancy, childbirth, or puerperium. (Puerperium is approximately six weeks from childbirth until the uterus returns to normal size.)
Total pregnancy	All live births, plus all induced abortions, plus all spontaneous abortions or stillbirths.

FORMULAS USED IN THIS VOLUME

Crude Birth Rate	$\frac{\text{Total Live Births}}{\text{Total Population}}$	x	1,000
Age-Specific Fertility Rate	$\frac{\text{Total Live Births in Age Group}}{\text{Total Female Population in Age Group}}$	x	1,000
Crude Live Birth Rate to Unwed Mothers	$\frac{\text{Total Live Births to Unwed Mothers}}{\text{Total Female Population (15-44)}}$	x	1,000
Age-Specific Live Birth Rate to Unwed Mothers	$\frac{\text{Total Live Births to Unwed Mothers in Age Group}}{\text{Total Female Population in Age Group}}$	x	1,000
Percent of Live Births by Birthweight	$\frac{\text{Total Live Births in Weight Group}}{\text{Total Live Births}}$	x	100
Percent of Out-Of-Hospital Live Births	$\frac{\text{Total Out-of-Hospital Live Births}}{\text{Total Live Births}}$	x	100
Crude Spontaneous Abortion Rate	$\frac{\text{Total Spontaneous Abortions}}{\text{Total Female Population (15-44)}}$	x	1,000
Age-Specific Spontaneous Abortion Rate	$\frac{\text{Induced Abortions in Age Group}}{\text{Total Female Population in Age Group}}$	x	1,000
Crude Induced Abortion Rate	$\frac{\text{Total Induced Abortions}}{\text{Total Female Population (15-44)}}$	x	1,000
Age-Specific Induced Abortion Rate	$\frac{\text{Induced Abortions in Age Group}}{\text{Total Female Population in Age Group}}$	x	1,000
Crude Mortality Rate	$\frac{\text{Total Deaths}}{\text{Total Population}}$	x	1,000
Infant Mortality Rate	$\frac{\text{Total Infant Deaths}}{\text{Total Live Births}}$	x	1,000
Neonatal Mortality Rate	$\frac{\text{Total Infant Deaths < 28 Days}}{\text{Total Live Births}}$	x	1,000

Post-Neonatal Mortality Rate	$\frac{\text{Total Infant Deaths 28 Days to < 1 Year}}{\text{Total Live Births}}$	x	1,000
Lifestage-Specific Mortality Rate	$\frac{\text{Total Deaths in Lifestage}}{\text{Total Population in Lifestage}}$	x	100,000
Cause-Specific Mortality Rate	$\frac{\text{Total Deaths From Specific Cause}}{\text{Total Population}}$	x	100,000
Maternal Mortality Rate	$\frac{\text{Total Maternal Deaths}}{\text{Total Female Population (15-44)}}$	x	100,000
Marriage Rate	$\frac{\text{Total Marriages}}{\text{Total Population}}$	x	1,000
Divorce Rate	$\frac{\text{Total Divorces}}{\text{Total Population}}$	x	1,000
