**VITAL STATISTICS**

**DATA BOOK**

**1982**

A Publication of the

**Vital Records and Health Statistics Unit**

**Georgia Department of Human Resources  
Division of Public Health**

**June, 1984**

## **INTRODUCTION**

This volume is the 36th annual **Vital Statistics Report of the State of Georgia**. It is intended to serve as a basic resource tool providing useful information to individuals, institutions, and agencies involved with the many phases of planning, especially the planning and evaluation of health services for Georgia citizens.

The tables in this volume reflect annual frequencies and rates of occurrence of vital events for the State, 19 Health Districts, 7 Health Service Areas, 8 Standard Metropolitan Statistical Areas, 159 Counties, and 147 Cities.

The Office of Planning and Budget (OPB) civilian, non-institutionalized population projections were adjusted by adding back a resident residual component. These projections are included in the publication to allow the reader to compute rates not included in this volume.

Please refer to the section on **Technical Notes** for definitions and formulas used in this publication.

We hope the information provided will prove helpful to users of this document. Any comments or suggestions regarding this publication will be welcomed.

Please contact :

**Vital Records and Health Statistics Unit  
Division of Public Health  
47 Trinity Ave., SW  
Atlanta, Ga.  
30334**

**404-656-4922**

*This report includes all 1982 births and deaths for which records were received before March 31, 1983, but excludes certificates and transcripts received after that date (exclusive of infant deaths). Because the number of 1982 vital events not included is small, the figures shown are relatively complete counts and are considered satisfactory as descriptive statistics.*

## TECHNICAL NOTES

This section is designed to provide the reader with some definitions and formulas of the rates used in this volume, as well as other rates that might be calculated from data contained herein. Note that these rates may not agree with rates used in previous publications from this office, from other states, or national statistics.

Whenever comparing statistics it is essential to determine whether or not the rates are the same. For example, birth rates are often reported as either **crude** or **fertility** rates. The calculation of a **crude** rate is based on total population, whereas the calculation of a **fertility** rate is based on the female population of childbearing age. **Fertility** rates may differ, however, because of the definition of women of childbearing age. Total birth rates in this publication are per 1000 females age 15-44.

The definitions and formulas in this section are arranged in the order of their appearance in the main text. A small section contains the formulas for calculating some rates that are not included in the volume; however, data are available in the volume for calculating these rates.

Finally, this section also includes some definitions and formulas for rates that cannot be calculated from data included in this volume but which are likely to be seen in other publications.

## DEFINITIONS

1. Population 1982 Office of Planning and Budget (OPB) civilian, non-institutionalized population projections adjusted with a 1980 resident residual component.
2. Race Race classifications are tabulated by white and black categories only. Other and unknown races are included in the total category.
3. Live Birth to an Unwed Mother A live birth to an unmarried female or to one who did not state marital status on the birth certificate.
4. Immature Birth A live birth with a weight of 5½ pounds (2500 grams) or less; or if weight is not specified, a live birth with length of gestation less than 37 weeks.
5. Spontaneous Abortion Conception resulting in other than a live birth or induced abortion.
6. Induced Abortion Purposeful interruption of pregnancy with the intent to produce other than a live born infant or to remove a dead fetus.
7. Infant Death A death occurring during the first year of life.
8. Neonatal Death A death occurring to an infant less than 28 days of age.
9. Postneonatal Death A death occurring to an infant 28 days to 1 year of age.
10. Maternal Death A death resulting from complications of pregnancy, childbirth, or puerperium.

## FORMULAS USED IN THIS VOLUME

1. General Fertility Rate  $\frac{\text{Total Live Births}}{\text{Female Population Age 15-44}} \times 1000$
2. Age-Specific Fertility Rate  $\frac{\text{Total Live Births in Age Group}}{\text{Female Population in Age Group}} \times 1000$
3. Live Birth Rate to Unwed Mothers  $\frac{\text{Total Live Births to Unwed Mothers}}{\text{Total Live Births}} \times 1000$
4. Live Birth Rate to Unwed Mothers (Age-Specific)  $\frac{\text{Total Live Births to Unwed Mothers in Age Group}}{\text{Total Births in Age Group}} \times 1000$
5. Birth Weight Specific Rate  $\frac{\text{Total Births in Weight Group}}{\text{Total Births}} \times 1000$
6. Out of Hospital Birth Rate  $\frac{\text{Total Out of Hospital Births}}{\text{Total Births}} \times 1000$
7. Spontaneous Abortion Rate  $\frac{\text{Total Spontaneous Abortions}}{\text{Total Births}} \times 1000$
8. Age-Specific Spontaneous Abortion Rate  $\frac{\text{Spontaneous Abortions in Age Group}}{\text{Total Births in Age Group}} \times 1000$
9. Induced Abortion Rate  $\frac{\text{Total Induced Abortions}}{\text{Total Conceptions}} \times 1000$
10. Age-Specific Induced Abortion Rate  $\frac{\text{Induced Abortions in Age Group}}{\text{Total Conceptions in Age Group}} \times 1000$
11. Crude Mortality Rate  $\frac{\text{Total Deaths}}{\text{Total Population}} \times 100,000$
12. Infant Mortality Rate  $\frac{\text{Total Infant Deaths}}{\text{Total Live Births}} \times 1000$
13. Neonatal Mortality Rate  $\frac{\text{Total Infant Deaths < 28 Days}}{\text{Total Live Births}} \times 1000$
14. Postneonatal Mortality Rate  $\frac{\text{Total Infant Deaths } \Rightarrow \text{ 28 Days But < 1 Year}}{\text{Total Live Births}} \times 1000$

15. Life-Stage Specific Mortality Rate  $\frac{\text{Total Deaths in Life-Stage}}{\text{Population in Life-Stage}} \times 100,000$
16. Cause Specific Mortality Rate  $\frac{\text{Total Deaths from Specific Cause}}{\text{Total Population}} \times 100,000$
17. Marriage Rate  $\frac{\text{Total Marriages}}{\text{Total Population}} \times 1000$
18. Divorce Rate  $\frac{\text{Total Divorces}}{\text{Total Population}} \times 1000$

## **DEFINITIONS OF STATISTICS NOT INCLUDED IN THIS VOLUME**

1. **Age-Adjusted Mortality Rate**      The sum of the age-specific mortality rates in 5 year age groups, multiplied by the proportion of a standard million represented by each age group.
  
2. **Gravidity**      Number of times previously pregnant plus, plus current pregnancy.
  
3. **Live Birth Order**      Number of previous live births, plus current birth.
  
4. **Natural Increase**      The excess of births over deaths while holding migration constant.
  
5. **Parity**      Number of previous deliveries of longer than 20 weeks gestation.
  
6. **Perinatal Mortality**      Death of a fetus or newborn infant occurring near the expected time of birth.  
    Perinatal Period I : Fetal death of 28 or more weeks gestation and infant death occurring the first seven days of life.  
    Perinatal Period II : Fetal death of 20 or more weeks gestation and infant death occurring in the first 28 days of life.
  
7. **Total Fertility Rate**      If the age-specific fertility rates for all ages are added and multiplied by the intervals into which the ages are grouped, the result is a total fertility rate. The resulting figure is an estimate of the number of children that a cohort of 1,000 women would have, if, during their reproductive years, they reproduced at the rates represented by the age-specific fertility rates from which the total fertility rate is computed. That number, divided by 1,000 is the estimate average number of children per woman of childbearing age.

**SOME RATES NOT USED IN THIS VOLUME**

(but can be calculated from data contained in this volume)

1. Crude Birth Rate	$\frac{\text{Total Live Births}}{\text{Total Population}} \times 1000$
2. Total Pregnancy Rate	$\frac{\text{Live Births} + \text{Spontaneous Abortions} + \text{Induced Abortions}}{\text{Female Population Age 15-44}} \times 1000$
3. Age-Specific Pregnancy Rate	$\frac{\text{Live Births} + \text{Spontaneous Abortions} + \text{Induced Abortions in Age Group}}{\text{Female Population in Age Group}} \times 1000$
4. Spontaneous Abortion Ratio	$\frac{\text{Total Spontaneous Abortions}}{\text{Total Live Births} + \text{Spontaneous Abortions}} \times 1000$
5. Induced Abortion Ratio	$\frac{\text{Total Induced Abortions}}{\text{Total Live Births}} \times 1000$

**ADDITIONAL FORMULAS NOT INCLUDED IN THIS VOLUME**

1. Age-Adjusted Mortality Rate :

$$\sum_{0-4}^{85+} \left( \text{Age-Specific Mortality Rate in 5 Year Age Groups} \times \text{Age Group Proportion in Standard Million} \right)$$

2. Total Fertility Rate

$$\sum_{10-14}^{45-49} \text{Age-Specific Fertility Rate} \times 5$$
