This report includes data taken from certificates or reports of birth, death, marriage, divorce, spontaneous abortion or stillbirth, and induced abortion which were received in the State Vital Records office by June 30, 1985. The figures reflect data of vital events occurring to residents of Georgia, including resident military, and to Georgia residents in other states or countries.

The aggregation of infant mortality frequencies and rates is determined by the mother's indicated residence, as shown on the matching Certificate of Live Birth. Infant deaths occurring to resident military personnel are included.

Finally, frequencies for blacks and whites in some tables may not equal to the total figure shown. The difference is accounted for by "other races;" however, all races are included in the total category.

The coded residence of infant deaths are adjusted in the following manner:

BIRTH CERTIFICATE	DEATH CERTIFICATE	CODE ADJUSTMENT
Georgia	Georgia	Mother's Residence on Birth Certificate
Georgia	Not Georgia	Mother's Residence on Birth Certificate
Not Georgia	Georgia	(1) <28 Days: Residence on Death Certificate (2) >28 Days: Residence of Mother on Birth Certificate

INTRODUCTION

This volume is the 38th annual **Vital Statistics Report** of the State of Georgia. Its purpose is to serve as a basic resource tool to provide useful information to public and private individuals, institutions, and agencies involved with the many phases of planning, especially the planning and evaluation of health services for Georgia citizens.

The tables in this volume reflect annual frequencies and rates of occurrence of vital events for the state's residents, 19 health districts, 7 health service areas, 8 standard metropolitan statistical areas, 159 counties, and 147 cities.

The Office of Planning and Budget's civilian, noninstitutional population projections, used in this volume, were adjusted by adding a resident residual component. These projections are included to allow the reader to compute rates not represented in this volume.

Please refer to the section on **Technical Notes** for definitions and formulas used in this publication. Other data not presented are available upon request. Some requests may require a fee, however. Send requests to the address shown below.

We hope the information provided will prove helpful to users of this document. Comments or suggestions regarding this publication will be welcomed.

TECHNICAL NOTES

This section provides the reader with definitions and formulas of the rates used in this volume. Note that these rates may not agree with rates used in previous publications from this office, from other states, or from national statistics.

When comparing statistics, it is essential to determine whether or not the basis for computing rates is the same. For example, birth rates are often reported as either **crude** or **fertility** rates. The calculation of a **crude rate** is based on total population, whereas the calculation of a **fertility rate** is based on the female population of childbearing age. Total birth rates in this publication are per 1,000 females, ages 15-44.

The definitions and formulas in this section are arranged in the order of their appearance in the main text. Marriage and divorce figures are not included in the city section.
