INTRODUCTION

This volume is the 41st annual Vital Statistics Report of the State of Georgia. Its purpose is to serve as a reference source to provide useful information to public and private individuals, institutions, and agencies involved with the many phases of planning, especially the analysis, planning and evaluation of public health services for Georgia citizens.

The tables in this volume reflect annual frequencies and rates of vital events for the state's residents (except as noted) by state, health district, metropolitan statistical area, and county.

The Office of Planning and Budget's civilian, noninstitutional population projections used in this volume, were adjusted by adding a resident military component. These projections are included to allow the reader to compute rates not represented in this volume. The reader must note, however, that there have been substantial changes in some county populations. In 1986, OPB re-calculated population estimates through 1990. The rates shown in this volume, therefore, may vary slightly from previous publications or other projections due to these changes.

Please refer to the section on **Technical Notes** for definitions and formulas used in this report. Other vital statistics data not presented is available upon request but may require a fee to produce. Send all statistical requests to:

Vital Records and Health Statistics Unit
878 Peachtree Street, N.E., Suite 200
Atlanta, Georgia 30309

We hope the information provided will prove helpful. Comments or suggestions regarding this publication are welcomed.

This report includes 1987 Georgia resident data taken from certificates or reports of birth, death, marriage, divorce, spontaneous abortion or stillbirth, and induced abortion which were received in the State Vital Records office by June 30, 1988. The figures and rates reflect data from vital events occurring to residents of Georgia, including resident military, and to Georgia residents in other states or countries.

Please note, frequencies for blacks and whites in some tables may not equal to the total figure shown. The difference is accounted for by "other" races; however, all races are included in the total category.

The assignment of infant mortality frequencies and rates is determined by the mother's indicated residence as shown on the matching Certificate of Live Birth. Infant deaths occurring to resident military personnel are included.

The coded residence of infant deaths is adjusted in the following manner:

<u>BIRTH CERTIFICATE</u>	<u>DEATH CERTIFICATE</u>	<u>RESIDENCE ADJUSTMENT CODE</u>
Georgia Resident	Georgia Resident	Mother's Georgia residence on Birth Certificate
Georgia Resident	Not Georgia Resident	Mother's Georgia Residence on Birth Certificate
Not Georgia	Georgia as state of death occurrence but not residence.	Residence as shown on death certificate, if not Georgia residence, these deaths are not included in the annual total of resident infant deaths.

The number of resident infant deaths published in the annual VITAL STATISTICS REPORT should be the same as the number of resident matched infant death/birth records sent to district health directors during the year.

TECHNICAL NOTES

This section provides the reader with definitions and formulas of the rates used in this volume. Note that some of these rates may not agree with rates used in earlier publications from this office, from other states, or from national sources.

When comparing statistics, it is essential to determine whether or not the basis for computing rates is the same. For example, birth rates are often reported as either **crude** or **fertility** rates. The calculation of a **crude rate** is based on total population, whereas the calculation of a **fertility rate** is based on the female population of childbearing age. Total birth rates in this publication are per 1,000 females, ages 15-44.

The definitions and formulas in this section are arranged in the order of their appearance in the main text.

Marriages frequencies and rates are determined by the county of application of the marriage.

DEFINITIONS

Population	Office of Planning and Budget (OPB) civilian, noninstitutionalized population projections including an estimated resident military component for appropriate counties.
Race	Race classifications are tabulated by white and black categories. "Other" or unknown races are included in the total category.
Live birth to an unwed mother	A live birth to a stated unmarried female or to one who did not state marital status and no father's name appears on the birth certificate.
Low birth weight	A live birth with a weight of less than 2,500 grams.
Very Low birth weight	A live birth with a weight of less than 1,500 grams.
Spontaneous abortion or stillbirth	Pregnancy resulting in other than a live birth or induced abortion.
Induced abortion	The purposeful interruption of pregnancy with the intent to produce other than a live infant or to remove a dead fetus.
Infant mortality	A death occurring to an infant less than one year of age.
Neonatal mortality	A death occurring to an infant less than 28 days of life.
Postneonatal mortality	A death occurring to an infant 28 days or more, but less than one year of age.
Maternal mortality	A death resulting from complications of pregnancy, childbirth, or puerperium.
Total conceptions	All live births, plus all induced abortions, plus all spontaneous abortions or stillbirths.

FORMULAS USED IN THIS VOLUME

Crude Birth Rate	$\frac{\text{Total live births} \times 1,000}{\text{Total population}}$
Age-specific fertility rate	$\frac{\text{Total live births in age group}}{\text{Total female population in age group}} \times 1,000$
Crude live birth rate to unwed mothers	$\frac{\text{Total live births to unwed mothers} \times 1,000}{\text{Total female population (15-44)}}$
Age-specific live birth rate to unwed mothers	$\frac{\text{Total live births to unwed mothers in age group}}{\text{Total female population in age group}} \times 1,000$
Percent of live births by birthweight	$\frac{\text{Total live births in weight group}}{\text{Total live births}} \times 100$
Percent out-of-hospital live births	$\frac{\text{Total out-of-hospital live births}}{\text{Total live births}} \times 100$
Crude spontaneous abortion rate	$\frac{\text{Total spontaneous abortions} \times 1,000}{\text{Total female population (15-44)}}$
Age-specific spontaneous abortion rate	$\frac{\text{Spontaneous abortions in age group}}{\text{Total female population in age group}} \times 1,000$
Crude induced abortion rate	$\frac{\text{Total induced abortions} \times 1,000}{\text{Total female population (15-44)}}$
Age-specific induced abortion rate	$\frac{\text{Induced abortions in age group}}{\text{Total female population in age group}} \times 1,000$
Crude Mortality rate	$\frac{\text{Total deaths} \times 1,000}{\text{Total population}}$
Infant mortality rate	$\frac{\text{Total infant deaths} \times 1,000}{\text{Total live births}}$
Neonatal mortality rate	$\frac{\text{Total infant death <28 days}}{\text{Total live births}}$
Postneonatal mortality rate	$\frac{\text{Total infant deaths 28 days to <1 year}}{\text{Total live births}} \times 1,000$
Life-stage-specific mortality rate	$\frac{\text{Total deaths in life stage}}{\text{Total population in life stage}} \times 100,000$
Cause-specific mortality rate	$\frac{\text{Total deaths from specific cause}}{\text{Total population}} \times 100,000$

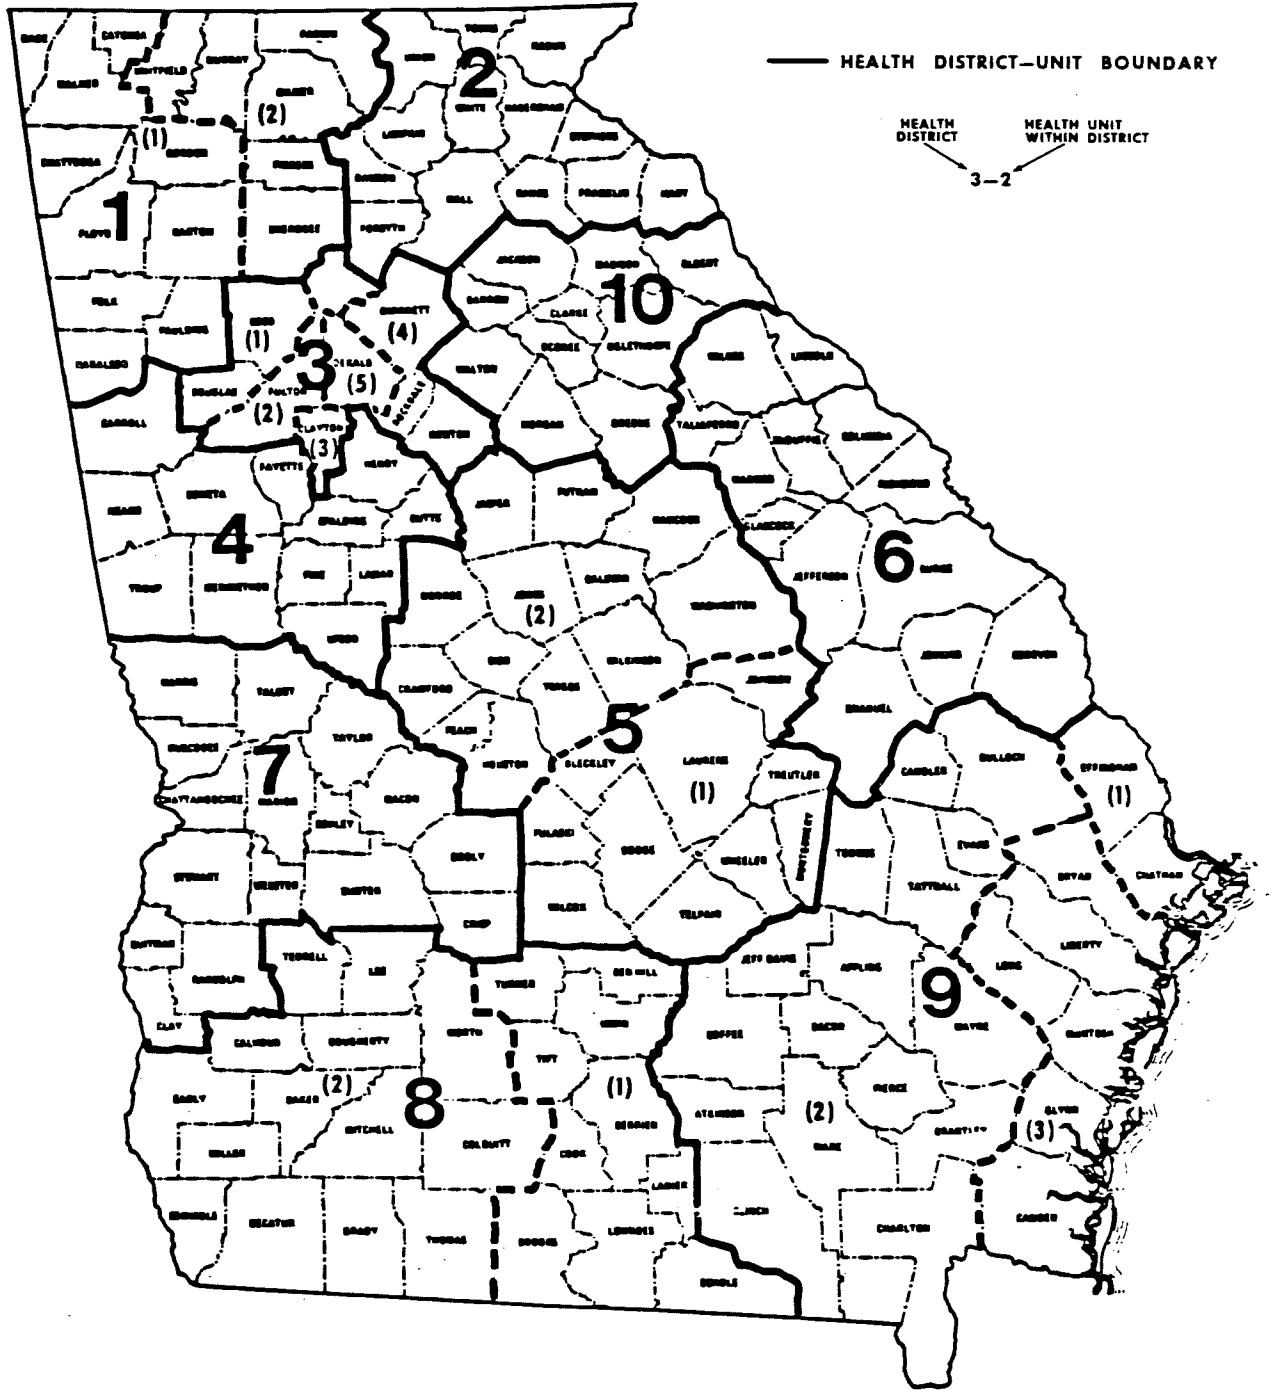

Marriage rate

$\frac{\text{Total marriages} \times 1,000}{\text{Total population}}$

Divorce rate

$\frac{\text{Total divorces} \times 1,000}{\text{Total population}}$
