## INTRODUCTION

This publication is the 73rd continuous production of Vital Statistics Data of the State of Georgia. The 1992 data set is divided into several parts: Natality, Mortality, Marriage, Divorce and Population. The purpose of presenting this data is to serve as a reference for vital statistics information to individuals, institutions, and agencies involved with Health Services; especially the analysis, planning, and evaluation of Public Health service delivery for Georgia citizens.

The data in this volume reflect annual frequencies and rates of vital events for the state's residents (except as noted) by state, health district, metropolitan statistical area, county and city tables.

**The populations used to determine rates are based upon the 1990 Census of the United States.**

This report includes 1992 Georgia resident data taken from birth, death, spontaneous fetal death, induced abortion, marriage, and divorce certificates received in the State Vital Records office by June 30, 1993. (Records received after this date are not included in this report). The figures and rates shown in the tables reflect data from reported vital events. The difference between the "Total" and the sum of white and black (if any,) is accounted for by "Other" races. All races are included in the

"Total" category.

Other vital statistics data not presented in the publication are available upon request, but may require a fee to reproduce.

Send all statistical requests to:

Quality Improvement Branch  
Two Peachtree Street (NW)  
Third Floor Annex  
Atlanta, Georgia 30303  
(404) 657-6321

We trust the information provided in this volume will prove helpful. Comments or suggestions regarding this publication are welcome.

NOTE: When "Black" vital statistics are shown, these are considered only "Black" and do not include "Other" races. The "Total" vital statistics figures include all races, therefore, "Other" races may be calculated by subtracting "White" and "Black" from the "Total" in each row.

In the case of populations, "Black" and "White" will equal the total. Black populations include all races except white.

## INFANT MORTALITY

The assignment of infant mortality frequencies and rates is mainly determined by the mother's residence as shown on the matching Certificate of Live Birth.

The following methodology is employed to assign infant deaths to counties in Georgia. Each infant death record, and the corresponding birth record, is reviewed to determine the county of residence. However, several types of infant death record matches may occur during the year. Each process is detailed below.

Type (1) The majority of infant deaths occur in the same county where the infant was born. This usually means that the county of residence is the same on both certificates.

Example: The infant death certificate shows Fulton County as the residence. The matching birth certificate shows the mother's residence also as Fulton County. This infant death is coded to Fulton County (code 060). Copies of the matched infant death and birth records are sent to District 3 Unit 2 (Fulton).

Type (2) Some matched records show different counties of residence on the certificates. These records are queried back to the appropriate local registrar to determine if the county of residence shown is correct on each record. If the indicated residences are actually different, the infant death is assigned to the mother's county of residence as shown on the birth certificate.

This is consistent with National Center for Health Statistics procedure for all states.

Example: An infant death certificate shows Fulton County (code 060) as the residence but the matching birth record indicates Dekalb County (code 044). The infant death is assigned to Dekalb County.

Type (3) Some infant deaths (or matching births) occur to Georgia residents in other states (mostly in Florida, Alabama, Tennessee, North Carolina and South Carolina). Copies of these certificates are sent to Georgia because there is a vital records inter-state exchange agreement between all states.

Example: An infant death occurs to a Georgia resident in Alabama. A copy of an Alabama death certificate is received in the state office of vital records showing Muscogee County as residence. The Georgia matching birth certificate shows Muscogee County as the mother's residence. In this case, the infant death is assigned to Muscogee County.

Type 4 If a Georgia resident is shown on an out-of-state (non-Georgia) death record and no Georgia birth record can be found to match it, the assignment of the infant death will be to the county of residence shown on the death record.

Example: A copy of a South Carolina death certificate is received in the state office showing Richmond County as residence. No Georgia birth record is found or South Carolina birth recorded. This infant death is assigned to Richmond County, District 6 (Augusta).

Any non-Georgia resident recorded on an infant death record is not counted in the Georgia resident infant mortality rate. Copies of these records are sent to the state shown on the death certificate.

The publication format has been revised. Previously three separate volumes were used to produce the annual vital statistics and population data. This publication contains birth, death, and population information in one volume. The first part shows natality statistics, the second mortality, and the third populations.

The pages are not numbered in this volume as each table is identified by state, health district, MSA, county, or city. Health Districts are in numerical order, while all other geographic areas are shown alphabetically.

Please let me know if this format is more useful than the previous volumes.

Michael R. Lavoie

## DEFINITIONS

Population	Projections based on the 1990 Census.
Race	Race classifications are tabulated by white and black categories as stated on vital records. "Other" or unknown races are included in the total category.
Live birth to an unwed mother	A live birth to an unmarried female or to one who did not state marital status, and no father's name appears on the birth certificate.
Low birth weight	A live birth with a birth weight less than 2,500 grams.
Very low birth weight	A live birth with a birth weight less than 1,500 grams.
Spontaneous abortion or stillbirth	A Fetal death is an outcome of pregnancy other than a live birth or induced abortion. There are no weight or gestational age limits for reporting fetal deaths in Georgia.
Induced abortion	The purposeful interruption of a pregnancy with the intent to produce other than a live infant or to remove a dead fetus.
Infant mortality	A death occurring to an infant less than one year of age.
Neonatal mortality	A death occurring to an infant less than 28 days old.
Postneonatal mortality	A death occurring to an infant age 28 days or more, but less than one year of age.
Maternal mortality	A death resulting from complications of pregnancy, childbirth, or puerperium.
Total conceptions	All live births, plus all induced abortions, plus all spontaneous abortions or stillbirths.

## FORMULAS USED IN THIS VOLUME

Crude Birth Rate	$\frac{\text{Total live births}}{\text{Total population}} \times 1,000$
Age-specific fertility rate	$\frac{\text{Total live births in age group}}{\text{Total female population in age group}} \times 1,000$
Crude live birth rate to unwed mothers	$\frac{\text{Total live births to unwed mothers}}{\text{Total female population (15-44)}} \times 1,000$
Age-specific live birth rate to unwed mothers	$\frac{\text{Total live births to unwed mothers in age group}}{\text{Total female population age group}} \times 1,000$
Percent of live births by birth weight	$\frac{\text{Total live births in weight group}}{\text{Total live births}} \times 100$
Percent of out-of-hospital live births	$\frac{\text{Total out-of-hospital live births}}{\text{Total live births}} \times 100$
Crude spontaneous abortion rate	$\frac{\text{Total spontaneous abortions}}{\text{Total female population (15-44)}} \times 1,000$
Age-specific spontaneous abortion rate	$\frac{\text{Spontaneous abortions in age group}}{\text{Total female population in age group}} \times 1,000$
Crude induced abortion rate	$\frac{\text{Total induced abortions}}{\text{Total female population (15-44)}} \times 1,000$
Age-specific induced abortion rate	$\frac{\text{Induced abortions in age group}}{\text{Total female population in age group}} \times 1,000$
Crude mortality rate	$\frac{\text{Total deaths}}{\text{Total population}} \times 1,000$
Infant mortality rate	$\frac{\text{Total infant deaths}}{\text{Total live births}} \times 1,000$
Neonatal mortality rate	$\frac{\text{Total infant deaths <28 days}}{\text{Total live births}} \times 1,000$
Postneonatal mortality rate	$\frac{\text{Total infant deaths 28 days to <1 year}}{\text{Total live births}} \times 1,000$
Life-stage-specific mortality rate	$\frac{\text{Total deaths in life stage}}{\text{Total population in life stage}} \times 100,000$
Cause-specific mortality rate	$\frac{\text{Total deaths from specific cause}}{\text{Total population}} \times 100,000$
Maternal mortality rate	$\frac{\text{Total maternal deaths}}{\text{Total female population (15-44)}} \times 100,000$

Marriage rate

$\frac{\text{Total marriages} \times 1,000}{\text{Total population}}$

Divorce rate

$\frac{\text{Total divorces} \times 1,000}{\text{Total population}}$

NOTE: A small number of events indicating unknown in some categories are assigned to the group of events showing the largest number of occurrences.
